Send2Cloud

Introduction

Send2Cloud helps you store documents to Dropbox in a fast and convenient way. A variety of document types is supported, including pdfs, documents, images, etc, and we are aiming to support most mainstream desktop browsers or mobile browsers.

How to Use

1. Connect Send2Cloud to Your Dropbox (Google Account Login Required)

[Connect](#)

2. Drag the Bookmarklet to Your Browser Bookmark Bar

[+Send2Cloud](#)

If your bookmark bar is hidden, you may need to show it first.

3. Open an Online Document

[A Sample PDF](#)

4. Click the Bookmarklet in the Document Tab

How It Works

1. Why Google Account Login?

Google account login is safe and convenient. You don't need to come up with a new password and let us store it. From Google Account Login, we only get your google user name (email address usually) as an ID, and we will never use it for spam.

2. What is bookmarklet?

From Wiki:

Simply, a bookmarklet is similar to a bookmark and is saved in the same manner.

More technically, a bookmarklet is unobtrusive script written in JavaScript and stored as the URL of a bookmark in a web browser or as a hyperlink on a web page.

3. How is the Online Document Sent?

With the bookmarklet, the URL of the document is sent to our server. Our server fetches the

document, and forwards it to your Dropbox account.

This saves the time and bandwidth compared with users uploading documents to servers, but impose an constraint: the link of the PDF should be static. So documents from authentication needed website (including emails) are unsupported.

4. Can You Access My Documents in Dropbox?

Simple answer: absolutely not.

More detailed one: When you connect Send2Cloud to Dropbox, we get an app-specific key/secret pair (not your email address and password) from Dropbox, and we use the pair to access a newly created directory for our app in your Dropbox. We can only access that directory, and we only forward documents to it, and never read it.

Supported Browsers

OS	Browser	Status
Mac OS	Safari	✓
Mac OS	Chrome *	✓
Ubuntu		x
Other	Other	?

* In Chrome, bookmarklet is not supported for https page.

Privacy

1. All files are sent to our servers and redirected to Dropbox servers in a streaming way, and none of your files is stored or logged in our servers.
2. "Getting Connected" means Send2Cloud only gets the access to the subdirectory of "Send2Cloud" in Dropbox, and only your Google user name and Dropbox app-specific key/secret pair (definitely not your user name and password) for Send2Cloud are stored.
3. We only get your Google user name (usually your email address) as an ID from Google account login, and we will never do spamming.
